Project Launch Checklist

Everything to verify before shipping a project to production.

NWARRAH

Systems, software & applied AI — engineered to last.

The final gate before go-live. Every box should be checked and owned.

Functionality

- All critical user journeys tested end-to-end.
- Forms validate, submit, and handle errors gracefully.
- Empty, loading, and error states designed.

Quality

- Cross-browser and responsive checks complete.
- Accessibility pass (keyboard, contrast, labels).
- No console errors or broken links.

Infrastructure

- Environment variables and secrets set in production.
- Database migrations applied and backed up.
- SSL, custom domain, and redirects configured.
- Monitoring, logging, and error tracking live.

Launch

- SEO: titles, meta, sitemap, robots, OG images.
- Analytics installed and firing.
- Rollback plan documented.
- Stakeholders notified of go-live window.
